I've been working for a couple of years in the Horeca industry while practising my programming skills. Now my main goal is to become a Full Stack Developer and continue my career in that specific domain. I had a personal gaming server project that ended in summer 2018 due to a lack of funds. The main framework was written in Java, my knowledges are far from perfect through.

Education

Institut Notre Dame, Beauraing

- Studied 4 years in the Informatics section. Learning all the basics and even further. (2014-2018)
- Studying Full Stack Developer at OpenClassRoom, an official e-learning platform located in Paris

Passion

Let's say that my work is my passion, I can't find any difference between the 2. In my opinion if you work, it's because you love it, and because you love it, you like your passion so you do for your work.

Except of that I like biking.

Knowledge

I've been working with Html and CSS for a couple of years know, so I can say I'm a pretty advanced programmer on that part, if you consider Html as a coding language.

I'm learning Java by myself, not a beginners state anymore but not an expert either.

With OpenClassrooms I'm now actively studying Java, Javascript, ReactJS, Bootstrap, Php, SQL, MongoDB, Ruby, Rails, Python and I can go on, but here are the languages/tools I'm actively learning and using.

- HTML/CSS
- Javascript and React
- Bootstrap
- SpigotAPI
- Git
- A little bit of SQL
- A lot more to come in 2019

My main goal is to manage all these coding languages so I can join any project where they need a developer.
I'm learning more every day!

Actually studying Full Stack Developer at OpenClassrooms.
